

Martyna Bulska

Product Designer

Summary

I've spent four years designing for a marketplace where 350,000+ people use the product to find work and get paid — consumer scale, enterprise complexity, real stakes. My background in psycholinguistics shapes how I approach design: hypothesis first, outcomes second. It shows in the numbers — +35% clock-ins, +12% job applications, +10% shift acceptance. I push back when problems are framed wrong, shape direction alongside PMs and engineers, and hold a high bar for craft from first principles to final pixel. Deep Figma proficiency, solid WCAG knowledge.

Experience

Job&Talent, Madrid - Spain

Two-sided workforce marketplace — B2B operator platform and worker-facing consumer app, serving 350,000+ users for enterprise clients including DHL, UPS, and Cabify across 10 countries.

Product Designer | September 2024 - Present

Junior Product Designer | June 2022 - September 2024

Owned the end-to-end design process across the worker app and Business platform — from Discovery and user research through to final UI delivery — improving onboarding, shift management, and engagement while collaborating with PMs, developers, and enterprise clients to shape product direction.

Impactful projects

- Led mobile-first redesign of multi-tenant architecture to let workers switch between employers in a single app — built on tenant-level switching and context-aware UI, opening up a 10x larger market (\$500B → \$5T TAM).
- Designed workplace productivity dashboards to give clients ROI visibility, targeting 30% weekly data uploads within 90 days.
- Challenged the way the business measured attendance — proposed Fill Rate as a clearer KPI, got stakeholder buy-in, and redesigned the UI around it. Simpler interface, stronger enterprise adoption.
- Used behavioral research to add gamification to the clock-in flow — rates went up 35% in six months.
- Built a guided feature tour that helped workers discover shift tools at the right moment — shift acceptance up 10%.
- Rethought job search with better filters, categories, and IA — applications increased by 12%.
- Designed a new in-app survey using progressive disclosure — 46% of users completed it.
- Contributed to the design system to help the team ship more consistently across web and mobile.

Prograils, Poland - Poznan

Tech consultancy delivering mobile apps, SaaS platforms, and web products across industries.

Junior Product Designer | November 2021 - July 2022

Worked across the full Discovery-to-delivery design process for clients in real estate and HR — leading stakeholder interviews, competitive analysis, and strategic definition before moving into UX and UI.

Impactful projects

- Redesigned how users search for homes and manage property data — worked through the full process from research to final mockups, which the dev team built into the live product.
- Led the design of an internal employee management tool from scratch — ran stakeholder interviews, looked at what competitors were doing, and shaped the product vision around what users actually needed.

Education

Collegium Da Vinci

Post graduate studies in Design for Mobile Apps | 2017

Poznan University of Economics

MA – Spacial Development | 2015

Adam Mickiewicz University

MA - English Studies | 2012

Skills & Tools

Product design:

End-to-end mobile and web design, systems thinking, multi-feature journey design, problem framing, hypothesis-driven iteration

Visual craft:

High-fidelity UI, intentional visual design, Figma (components, auto-layout, prototyping, design systems), Sketch, Framer

Research & strategy:

Behavioural science, user research, usability testing, app analytics, A/B testing, Value Proposition Canvas, Journey Mapping

Accessibility:

WCAG standards, inclusive design, mobile accessibility (HIG, Material Design)

AI tools:

Claude.ai, Lovable, V0, Cursor — used for rapid prototyping, ideation, and design system tooling

Collaboration: Cross-functional delivery with engineering, PM, analytics, data science, and enterprise stakeholders; experienced presenting and building alignment
